

Annexe 1 : Répartition des émissions de GES en Italie par secteurs en 2018

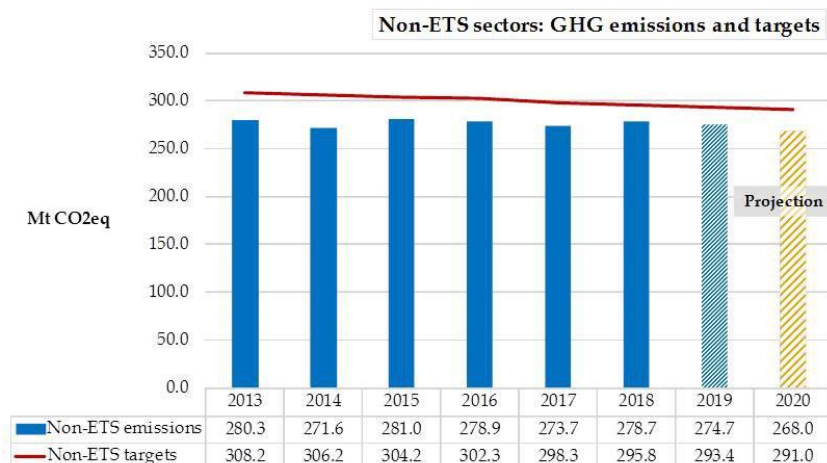

Annexe 2 : Objectifs européen et atteinte de ces objectifs par l'Italie

AREA / TIME FRAME	2013-2020	2021-2030
LEGISLATION	«Integrated Energy and Climate Change Package» European Council, 2007	«2030 EU Climate & Energy Framework» European Council, 2014
RENEWABLE ENERGY: share of energy consumption	20%	32.5% (updated)
ENERGY EFFICIENCY: improvements	+20%	+32% (updated)
GHG EMISSIONS REDUCTION: compared to 1990	-20%	-40% (at least)
ETS (compared to 2005)	-21%	-43%
Non-ETS (compared to 2005)	-10%	-30%
LULUCF (inclusion in targets)	NO	YES («no-debit» rule)
Italy's targets (compared to 2005)	Effort Sharing Decision (ESD): -13%	Effort Sharing Decision (ESR): -33%

Non-ETS sectors: trends and targets (2013-2020)

- Italy is well on track to meet its 2013-2020 targets allocated under the EU Effort Sharing Decision (ESD). Overachieved amounts from the 2013-2020 period will not be used for 2021-2030 compliance.
- 2020 projections were below target even before the impact of covid-19.

Sources:

- 2013-2018 data are historical data as in the latest GHG inventory submitted to the European Commission in March 2020, 2019 figures are provisional data.
- 2020 figures are from the reference scenario as communicated to the European Commission in April 2019 according to Regulation 525/2013 and from BR4 communicated to UNFCCC in December 2019 (* not yet taking into account the impact of Covid-19).
